

AlphaScreen *SureFire* Cellular Kinase Assays

For rapid detection of
full-length activated
kinases in cell lysates —
even with difficult targets

Combining PerkinElmer's versatile and highly sensitive AlphaScreen® technology with TGR Biosciences' *SureFire*® cellular kinase assays provide an innovative solution for screening kinase activation in whole cells.

HTS compatible

Whether you are running single plates or hundreds of plates, AlphaScreen *SureFire* assays will work for you. These two advanced technologies provide the ultimate homogeneous non-radiometric assay for full-length activated phosphorylated kinases in cell lysates. Easily miniaturizable, AlphaScreen *SureFire* is the choice for rapid and accurate high throughput screening.

Flexible Homogeneous Assays

AlphaScreen *SureFire* cellular kinase assays can be used with many different types of cells including; primary cells, cells recombinantly overexpressing cloned targets as well as cells endogenously expressing kinases or the target receptor.

These assays can be used to screen for therapeutic modulators of kinases, GPCRs, inflammatory targets and oncology targets. Use the AlphaScreen *SureFire* range of cellular kinase assays to analyze important pathways which include; insulin receptor and other tyrosine kinase receptor signaling via the PI 3-kinase pathway, MAP kinase-mediated pathways, inflammatory receptor signaling via p38 MAPK or JNK phosphorylation, tyrosine kinase receptor signaling through the ras/raf pathway, and cytokine receptor activation through JAK/STAT phosphorylation.

AlphaScreen SureFire —

Homogeneous cellular assays for phosphorylated kinases: no-wash, non-radiometric, miniaturizable cell-based functional HTS assays for activated kinases.

Suitable for over-expressed and endogenous receptors: extremely sensitive assay that can be used with cells over-expressing cloned targets or with cells expressing physiologically relevant endogenous levels of kinase or receptor target.

Screen for small or large molecule therapeutics: suitable for monitoring target modulation by monoclonal antibodies and small molecule inhibitors.

Use in many types of cells, including primary cells: flexible assay format and application use.

Easy to automate with excellent Z' values: utilizes HTS-proven AlphaScreen technology, which is easily automated and scalable to 384- and 1536-well microplate formats, while yielding outstanding S/Bs and Z' values.

AlphaScreen SureFire Kinase Assay Principle

AlphaScreen SureFire Kinase Assay Principle. Detection of the activated kinase is enabled by immuno-sandwich capture of endogenous phosphorylated kinase in cell lysates. Antibody-coated AlphaScreen beads generate a highly amplified signal when in close proximity due to the binding of the phospho-kinase.

Inhibition of PI3K Pathway Kinases by LY294002

Confluent mouse NIH-3T3 cells were serum starved ON and stimulated with PDGF for 10 minutes in the presence of various concentrations of LY294002 inhibitor. Phosphorylation of AKT (Ser473), AKT (Thr308) and p70 S6K (Thr389) kinases were measured using AlphaScreen SureFire Phospho-kinase and AlphaScreen Protein A detection reagents on an EnVision Alpha plate reader.

JAK/STAT Pathway Analysis STAT 3 & 5 Activation in A431 Cells

Human A431 cells were serum starved ON and stimulated with various concentrations of EGF. Phosphorylation of STAT 3 (Tyr705) and STAT 5 (Tyr694/Tyr699) kinases were measured using AlphaScreen SureFire Phospho-kinase and AlphaScreen Protein A detection reagents on an EnVision Alpha plate reader.

Inhibition of PI3K Pathway Kinases by Rapamycin

Confluent mouse NIH-3T3 cells were serum starved ON and stimulated with PDGF for 10 minutes in the presence of various concentrations of rapamycin inhibitor. Phosphorylation of AKT (Ser473), AKT (Thr308) and p70 S6K (Thr389) kinases were measured using AlphaScreen SureFire Phospho-kinase and AlphaScreen Protein A detection reagents on an EnVision Alpha plate reader.

Inhibition of Constitutive STAT 5 Phosphorylation in HEL Cells

Human HEL cells were serum starved ON and treated with various concentrations of JAK inhibitor. Phosphorylation of STAT 5 (Tyr694/Tyr699) kinase was measured using AlphaScreen SureFire Phospho-STAT 5 (Tyr694/Tyr699) and AlphaScreen Protein A detection reagents on an EnVision Alpha plate reader.

kinase pathway analysis made easy

AlphaScreen Technology — the ideal choice for accurately and economically screening a broad range of targets fast

The AlphaScreen *SureFire* cellular kinase assays are just a few of the many useful screening tools built on PerkinElmer's versatile AlphaScreen technology. AlphaScreen is a homogeneous, bead-based platform widely used in assay development and high throughput screening. The long excitation wavelength (680 nm) combined with a shorter emission wavelength (520 - 620 nm) reduces interference from biological samples or assay components, ensuring a very low background.

Unlike other proximity-based technologies, AlphaScreen beads can be up to 200 nm apart, allowing for the detection of very simple to very complex biological interactions, and substrates of many different sizes. **The result, high sensitivity at low attomole levels with a simple to set up and optimize, rapid assay.**

Optimized performance — use reagents with PerkinElmer instruments and plates

EnVision® Multilabel Microplate Reader. Get the speed and capacity your assay development or HTS lab needs with the EnVision Multilabel Plate Reader from PerkinElmer. Our fast application-oriented EnVision reader handles all non-isotopic detection technologies. The EnVision is optimized for our robust and sensitive AlphaScreen technology. Choose the AlphaScreen HTS Turbo option module for high throughput screening. Visit www.perkinelmer.com/platereaders to view our free interactive EnVision tutorial.

Better microplates mean better results. High quality microplates manufactured by the instrument and assay expert will give you better results, time after time.

You'll find the type, size and color you need for any assay application, detection technology and any plate reader. Don't waste time with general labware plates, choose plates developed and tested with your application in mind. Never forget – better plates, give better performance and better results. For up-to-date information on microplates visit www.perkinelmer.com.microplates today.
